## PREFACE

### A. General

The accuracy of the data is subject to reporting levels of the law enforcement agencies supplying the collision reports. The Department estimates that it receives collision reports for approximately 100 percent of all fatal accidents, 90 percent of all injury accidents and 40 percent of all property-damage-only accidents occurring on state highways.

The original data in this report was obtained from the California Highway Patrol Statewide Integrated Traffic Records System (SWITRS).

The information contained in this report is based on tabulations of accidents that occurred on state highways only. Accidents classified as associated with (as opposed to being on) state highways, as defined in the California Highway Patrol Collision Investigation Manual, are not included in this report with exception to section "E. Pedestrian Fatality and Injury Data" described on the following page.

### B. Comparative Accident Rates

Accident rates of existing road segments are used to predict the average rates on new roads, or to compare rates on other roads of the same type. The rates in the main tables of this publication present statistical data based on broad categories of road types and conditions and are generally not refined enough for comparative purposes. The base or average rates included in subsequent tables should be used instead.

Average rates for the various types of intersections and ramps are shown in the tables. Also shown are the average costs of fatal plus injury and all accidents for each rate group.

### C. Rate Calculations

Accident rates and fatality rates were computed using the following formulas:

$$\text{Accident Rate} = \frac{(\text{Number of Accidents}) \times (1,000,000)}{\text{Vehicle Miles of Travel}}$$

$$\text{Fatality Rate} = \frac{(\text{Number of Victims}) \times (100,000,000)}{\text{Vehicle Miles of Travel}}$$

The terms Rural and Urban are not to be confused with Inside and Outside Cities since they are not necessarily the same. Urban areas are defined and approved by the Federal Highway Administration (FHWA) on the general basis of urban characteristics and do not necessarily coincide with city boundaries.

Suburban areas are defined as areas inside city limits but classified as rural, plus areas outside city limits but classified as urban by the FHWA. All areas not classified as urban are rural.

#### D. Basic or Average Accident Rate Tables

The basic or average accident rate tables begin on page 83. The rates shown were all reviewed and revised during 2012.

The average rates for all highway, intersection and ramp rate groups are primarily based on accident data for the years 2008 through 2010. Additional years of data were used to increase the sample size for some rate groups. This additional data was used to determine the average accident rates and the percentages of fatal and injury accidents.

It should be noted that even with additional years of data, some of the rate groups are based on limited amounts of mileage and travel. The use of these rate groups by local agencies as a standard or average rate for local roads may or may not be entirely appropriate.

#### E. Pedestrian and Bicycle Fatality and Injury Data

The pedestrian tables begin on page 91. The data contained in these tables includes the number of pedestrians and dismounted pedestrians that were involved in accidents on California state highways. Beginning 2012, crosswalks on state highways are included as intersection accident locations.

The bicycle tables begin on page 101. The data contained in these tables include the number of bicyclists that were involved in accidents on California state highways.

The pedestrian and bicyclist data also includes accidents in the ramp area 4 and intersection area 6 as defined below.

- **Non-state Route – Associated with Ramp Area 4** is the area in an interchange on a county road or city street within 100 feet outside the outermost ramp terminal.
- **Non-state Route – Associated with State Route Intersection Area 6** is when a vehicle leaves the road from or when the accident occurs on a non-state route outside the state right of way limits and within 250 feet from the center of the intersection.

*A **pedestrian** is defined as any person not in or upon a vehicle, bicycle, or animal. This definition includes a person in or operating a pedestrian conveyance, such as a baby carriage, coaster wagon, skateboard (non-motorized), roller skates, skis, sled, non-motorized and motorized wheelchair, and a person in or upon a device moved by pedaling except a bicycle.*

*A **dismounted pedestrian** is defined as a person that has dismounted from a vehicle, bicycle, animal, or other mechanically or electrically powered device, not operated on rails, upon which or by which any person or property may be transported or drawn upon a roadway. This would include such vehicles as motorized skateboards or motorized bicycles (mopeds).*

*A **bicycle** is a device upon which any person may ride, propelled exclusively by human power through a belt, chain, or gears, and having one or more wheels. Every person riding a bicycle upon a highway has all the rights and is subject to all the provisions applicable to the driver of a vehicle except those provisions which by their very nature can have no application.*

#### F. Accident Charts

The 2012 accident charts begin on page 111. These charts show the number of accidents by month, day of week, hour of day, type of collision, primary collision factor, weather and lighting condition. Charts are compiled by *all* accidents, *fatal* accidents and *injury* accidents.

BASE RATES:

HIGHWAY SEGMENTS	ACCIDENTS/MILLION VEHICLE MILES (MVM)
INTERSECTIONS	ACCIDENTS/MILLION VEHICLE (MV) ENTERING THE INTERSECTION
RAMPS	ACCIDENTS/MILLION VEHICLE (MV) TRAVERSING THE RAMPS

ADT FACTOR:

VALUE TO BE ADDED TO THE BASE RATE.  
 "0.60/" MEANS 0.60 DIVIDED BY ADT IN THOUSANDS; I.E., WITH 5,000 ADT, 0.12 WOULD BE ADDED TO THE BASE RATE.  
 "0.017" MEANS 0.017 TIMES ADT IN THOUSANDS; I.E., WITH 20,000 ADT, ADD 0.34 TO THE BASE RATE.
