Fatality Analysis Reporting System (FARS) Auxiliary Datasets Analytical User's Manual 1982-2017

Auxiliary Data Files

A set of auxiliary files containing elements derived from the Fatality Analysis Reporting System (FARS) datasets has been created since 1982. These files contain elements that make it easier to extract certain data classifications and topical areas, such as commonly used age groups, speeding involved crashes, and distraction involved crashes. There is an Accident (Acc_Aux), Vehicle (Veh_Aux), and Person (Per_Aux) level auxiliary file for each year of data. For the complete list of data elements available for analysis in FARS, refer to the [FARS Analytical User's Manual](#). A listing of data elements found in each auxiliary file follows, however, not all elements are available back to 1982, which can be seen in the ensuing control total tables.

A_RESTUSE*	Restraint Use

*Note: Restraint use element A_REST was deleted and replaced with two new elements in 2017: 1) A_RESTUSE, and 2) A_HELMUSE. A_RESTUSE focuses on belts and child seats and should be used when doing restraint use analysis on motor vehicle occupants except for motorcyclists. A_HELMUSE focuses on motorcycle helmet use and should be used when doing helmet use analysis for motorcyclists. When using these variables, be sure to include the appropriate body types in your selection criteria as well. For the specific type of restraint system used – child seat, lap belt, shoulder belt, DOT-compliant motorcycle helmet, etc. – refer to the Restraint System/Helmet Use (REST_USE) in the FARS Person data file.

The following tables provide control totals for each attribute in each derived element from 1982 onward. However, not all auxiliary file data elements exist back to 1982 as shown in the following tables.
